

## OVERVIEW LTD HAS CALCULATED ITS CARBON FOOTPRINT FOR 2019

### Hazardous Chemicals

Overview strives to provide greener products to all customers. We have a full material breakdown of all our components, to ensure finished product complies with all legal requirements including REACH and RoHS.

All staff are trained on the safe use and handling of chemicals. All waste chemical products are disposed of in line with legal requirements. An Environment Agency registered waste carrier is used, and consignment notes are kept for compliance. Overview takes its duty of care seriously and endeavours to continually improve.

### Logistics & Transportation

We are committed to reducing transport environmental impact through ensuring we:

- Plan and consolidate our deliveries in good time to ensure the optimum transport method with the least impact on the environment is used
- Work closely with our suppliers so that they cooperate in reducing freight environmental impact
- Promote awareness by incorporating environmental consideration in procedures and communication

### Energy Monitoring and ACs

We reduced our average energy consumption by 23% over the year from April 2019 – March 2020. “We have had increased control over the energy consumption during our first full year at the Woking site. Combined with an active program of energy saving during this time, we have achieved this saving”.

### ISO Certification

Overview has been awarded ISO9001 and ISO14001. We are committed to using these systems to enhance business growth, maintain profitability, reduce our environmental impact and maintain customer satisfaction.

### Waste Management

Overview endeavours to lower waste output on an annual basis. The waste management hierarchy is followed actively with our packaging and general waste. All waste is segregated for collection by an Environment Agency registered company. Transfer notes are collected and stored for compliance.

Waste is collected by a registered company. General waste is taken to their EFW plant which supplies energy into 50000 houses across the South East.

We re-cycle 89% of our packaging waste.

### Development, Testing & Environment

Overviews' consideration to the environment begins at the development stage. Designers and engineers take into consideration the use of environmentally friendly and sustainable materials for current projects and future products. Suppliers activities are also monitored to ensure compliance.
